Abstract

The Himalaya is well recognized for its bio-physical diversity and socio-cultural heritage, traditional systems and an ample quantity of indigenous knowledge. The study was conducted with the help of Participatory Rural Appraisal (PRA) tool to document the diversity of fodder plants of Betalghat Block of Nainital District (Western Himalaya). Total 210 fodder plants species belonging to 70 families, 164 genera of different habits such as trees (35%), shrubs (31%), herbs (25%), and climbers (9%), were recorded. Out of 70 families, 12 dominant families were Poaceae (18 species), followed by Fabaceae (16 species), Moraceae (10 species), Rosaceae (10 species), Asteraceae (8 species), Euphorbiaceae (7 species), Mimosaceae (6 species), Caesalpinaeae (5 species), Ranunculaceae (5 species), Rhamnaceae (5 species), Urticaceae (5 species) and Rubiaceae (5 species). Of the total recorded species, 41% of the species were used during winter days, 38% during summer and 21% throughout the year. For each species, scientific and vernacular names, multipurpose uses (Fuel, medicinal, timber, agricultural tools, religious and fiber) were used. For the conservation of fodder plant species prioritization, mass multiplication with afforestation, reforestation and forest rehabilitation must be done.

Key words: Fodder Plants, Diversity, Betalghat Block, Participatory Rural Appraisal (PRA) tool.

Introduction

The abode of snow “Himalaya” is popularly known for its bio-physical diversity and socio-cultural heritage, unique physical and ethnic diversity, traditional systems and a plentiful quantity of naturally existing knowledge or tribal wisdom (Rao, 1989, 1994). People living in Himalayan villages, utilize plants for medicine, food, fodder, fuel, timber, agricultural implements and many more other purposes (Samant & Dhar, 1997, Samant et al., 2007). Total 1748 species of medicinal plants 675 species of wild edibles, 279 species of fodder, 118 species of essential oil yielding medicinal and aromatic plants and 155 species of sacred plants have been recorded in the Indian Himalayan region (Samant et al., 1998, Samant & Palni, 2000, Samant & Pant, 2003).

Uttarakhand is a part of Indian Himalayan Region (IHR) and its coordinates are latitudes $28^{\circ}43'45''$ - $31^{\circ}8'10''$ N and longitudes $77^{\circ}35'5''$ - $81^{\circ}2'25''$ E (Uniyal et al., 2007). The people living over this region are comparatively poor and are fully dependent on the biological resources. Integral part of their economy and major sources of their livelihood are agriculture and livestock.

The feeding requirements of livestock are met through forest-based fodder, agricultural and agro forestry systems (Purohit & Samant 1995, Singh et al., 1998). In traditional farms in the mountains of the Himalaya, fodder plays a vital role in the crop, livestock, manure and soil nutrient cycle (Shahima & Malaviya, 2014). Tree fodder is valuable and is very essential for temperate climate (Singh & Kanstra, 1981, Roder, 1992), particularly during winter months when quantity of green fodder is reduced and insufficient (Khanal & Subba 2001, Subba et al., 1994) and the quality is inappropriate (Vishvakarma et al., 1998, Roder et al., 2003). Quantity and quality of fodder varies from various seasons. It declines with the onset of dry and inclines with the onset of rainy season. Fodder resources used during winter are largely influenced by the many factors like the prevailing cropping systems, the environment and the type of minerals (Roder, 1992).

The Himalayan region is known to support about 84 trees and 40 shrubs of fodder value that the people use (Negi, 1977). Singh & Singh (2005) have estimated that in Uttarakhand the fodder leaf production from forests (77%), agricultural sector (12%), orchards (2.7%) and bushes/perennial herbs (19.2%), Singh et al., (1988) computed contribution of different sources of fodder for the Uttarakhand Himalayan region.

The agro-ecosystem of the Himalayan is very complex in which crop fields, livestock and forests are inter-linked among one another. The availability of green fodder is only for 4 months (monsoon). Remaining months of the year (winter and summer) green fodder is not

available resulting in low production of milk other animal related products. Different fodder yielding trees and shrubs differ from place to place and the tree lopped extensively for fodder in one place may not at all be lopped at another place.

Floristically and ethno-botanically this region has been studied by many workers; Atkinson, 1882, Osmaston, 1927, Gupta, 1968, Pangtey & Rawat, 1987, Gaur 1999, Joshi & Joshi, 2001, Tewari et al., 2010, Khan et al., 2013, Yadav & Bisht, 2013, Dhanai et al., 2014, Pandey et al., 2016, 2017.

In present study the diversity of fodder plants and its related indigenous knowledge are not properly documented. In recent years, documentation of traditional knowledge on wild plants becomes a prerequisite to preserve traditional knowledge of a region. Therefore, the present study was carried out to collect valuable information on diversity of fodder plants and its related indigenous knowledge of Betalghat Block of Nainital district, Western Himalaya with authentic scientific name, vernacular name, and family and economic uses for further research.

Material and Methods

Geographical description of study area

Study was conducted in twelve sites of Betalghat block (Nainital District) viz. Lohali, Halso-Korar, Richi-Thapal, Betalghat, Simtaya, Ratighat, Bhowali, Niglat, Chaura, Kanda, Bhatrojkhan and Khalad-Pankatara of Nainital district (during year 2016-2017) lies between $29^{\circ}38'925''$ North latitude and $79^{\circ}49'465''$ East longitude, covering an area of 256.33 Km² an altitudinal range varies from 700 to 1800 masl (**Fig. 1**). Study area is bounded by Tarikhet and Bhikyasain block of district Almora on the north, Kotabag block of district Nainital on the south, Sult block of district Almora on west and Ramgarh block of district Nainital on the east. The vegetation mainly comprises of tropical, sub-tropical and temperate forest.

Climate

Climate of District Nainital is characterized by long snowy winter and short summer season. It is temperate and monsoon type (Singh & Singh, 1992) having four distinct seasons viz., monsoon (July to September), post-monsoon (October to November), winter (December to January) and summer (April to mid-June). Climatic data were obtained with help of standard instrument. The average rainfall is 1800 mm. The maximum temperature in the Nainital district is 42.2°C and the minimum is -5.4°C .

Data collection and sample identification

The information on fodder plants and their economic uses and dependency of community on plant species collected from primary as well as secondary sources. Participatory Rural Appraisal (PRA) tools (Silverman, 2005) were used to carry out the study. The study is based on identification of fodder plants with the help and participation of local/rural peoples, farmers, traditional knowledge holders to know the local names and multipurpose uses, season of availability of the mentioned plants. The collected plants specimens were identified with the help of different floras and manuscripts, standard literature (Osmaston 1927, Gupta, 1968, Gaur 1999) and matched with the herbarium specimen of Regional Ayurvedic Research Institute, (RARI) CCRAS, Ranikhet. The well preserved plant specimens were deposited in the Herbarium of Department of Botany, Kumaun University, Nainital.

Results and Discussion

Diversity

The geographical peculiarities make the Himalayan region a very diverse system subtending a wide range of vegetation types. The people living over this region are fully dependent on the biological resources. Integral part of their economy and major sources of their livelihood are agriculture and livestock. The present study compiles 210 fodder plant species belonging

to 164 genera and 70 families, used by local people (**Table- 1**). Out of 70 families recorded poaceae (18 species) is the most diverse family, followed by fabaceae (16 species), moraceae, rosaceae (10 species each), asteraceae (8 species), euphorbiaceae (7 species), mimosaceae (6 species), caesalpinaeae, ranunculaceae, rhamnaceae, urticaceae and rubiaceae (5 species each) (**Fig. 2**). The plant species were categorized into their form of habit i.e. trees, shrubs, herbs and climbers (**Fig. 3**). The diversity on the basis of the plant revealed that trees formed the most dominant habit (35%), followed by shrubs (31%), herbs (25%) and climber (9%).

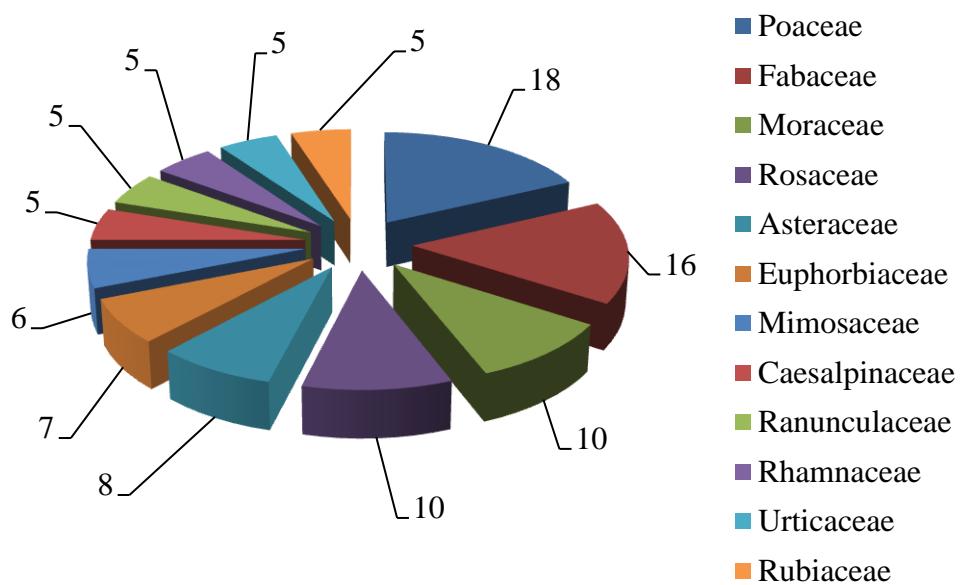

Fig. 2: Families representing highest number of fodder plant species

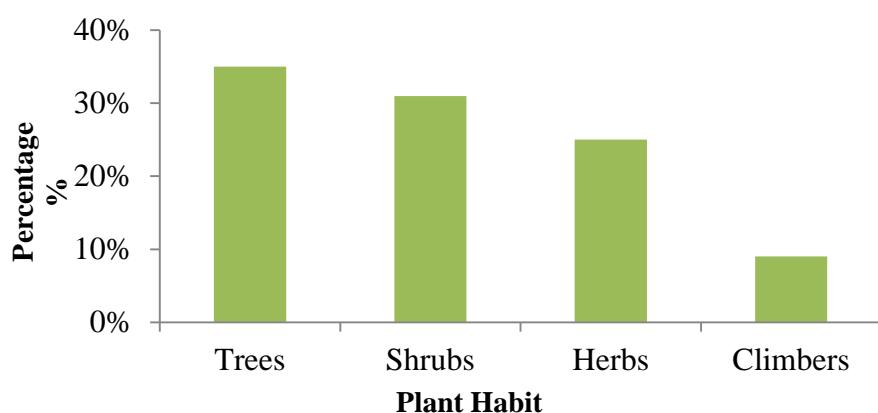

Fig. 3: Habit base diversity of fodder plant species

Economic importance

Besides fodder value, there are many fodder species used as fuel, wild edible, medicinal, timber, religious, making agricultural tools and fiber by the inhabitants. Of the total species,

50% species are used as fuel, 30% as medicinal, 7% as timber, 6% as agricultural implements, 5% as religious and 2% as fiber (**Table 1, 2 and Fig. 4**). In the percent distribution of plant part of different species being used leaf were most commonly used part (48%) followed by wood (27%), fruit, whole plant (6% each), bark, root (4% each), (4%), flower, seed (2% each) and tuber, stem latex (1% each) (**Fig. 5**).

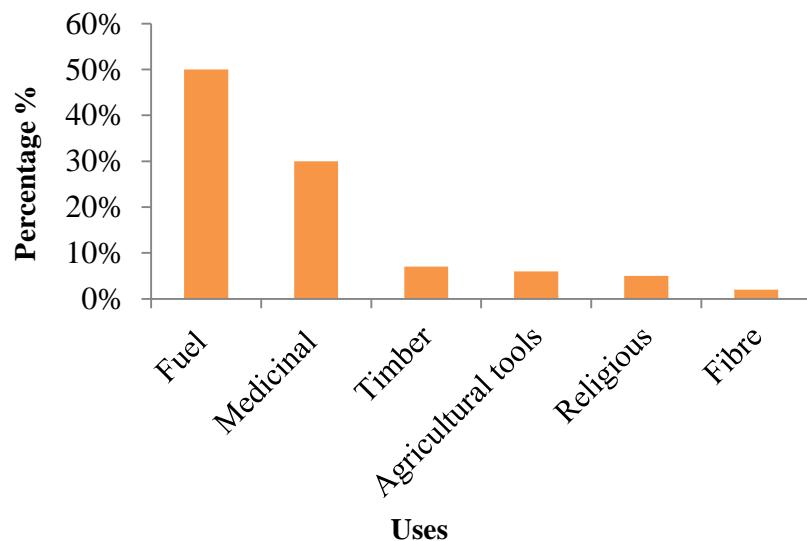

Fig. 4: Multipurpose uses of fodder plant species

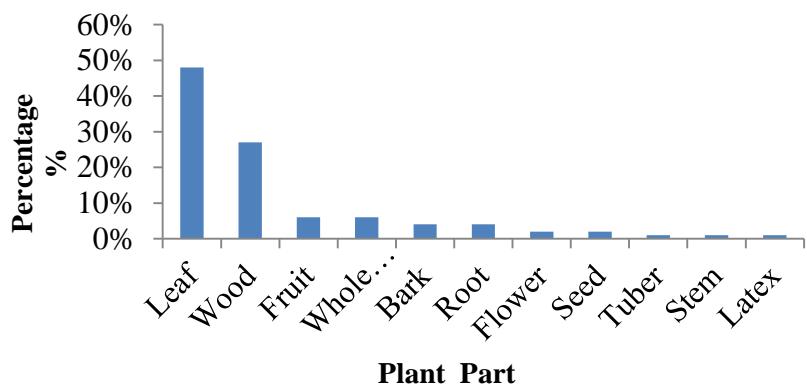

Fig. 5: Graphical representation of plant part used

Utilization pattern

Utilization pattern of fodder species varied from season to season. Of the total, 41% species were used in winter, 38% in summer and 21% throughout the year. Shrubs and climbers were used as fodder (Mostly sheep and goat). In rainy season, mostly grasses, climbers and herbs were used as fodder (**Table- 2**).

In present study total 210 species of fodder reported in Betalghat Blcok of Nainital district, Western Himalaya. Earlier studies support our study i.e. Pant & Samant (2005) reported 94 species of fodder in the Marnula reserve forest of Kumaun West Himalaya, Rawat et al.,

(2011) reported 67 species of fodder in North West Himalaya, India. A total of 46 species of fodder species found in Srinagar Garhwal Himalaya reported by Kanwal & Joshi (2015).

Conclusion

Majority of the fodder species are used as multipurpose and contributed to the high socio-economic values. Adequate information on diversity and multipurpose uses of fodder plant species of the Betalghat Blcok of Nainital District, Western Himalayas not available. The present study provides comprehensive information on the diversity, multipurpose uses and availability of fodder plant species for conservation. The use pattern varies from season to season. The variation in use pattern is due to the availability of the species in respective seasons. Prioritization, mass multiplication with afforestation, reforestation and forest rehabilitation is required for the conservation of fodder plant species. There is a need to analyze the nutritive values of fodder species for the identification of quality fodder can also be examine.

Acknowledgements

The authors are thankful to local people, informants for their immense help during the tenure of the study. We are also thankful to Director, Regional Ayurvedic Research Institute (RARI), CCRAS, Thapla, Ranikhet and Head, Department of Botany, Kumaun Universtiy, Nainital for providing infrastructure, facilities and encouragement. We are also thankful to IERP, GBPNIHESD, Kosi Katarmal, Almora.

Sd-Seed; Tb- Tuber; Lt- Latex; Wd- Wood; WP- Whole plant; Fu- Fuel; M- Medicinal; Ti- Timber; Re- Religious; At- Agricultural tools; Fb- Fibre.

Table 2: Occurrence of fodder plant species in different Seasons

Botanical Name	Local Name	Season			Mode of use
<i>Barleria cristata</i> L.	Jhinti	Summer	Rainy	Winter	F
<i>Dicliptera bupleuroides</i> Nees	Kawgori	Summer	Rainy	Winter	F
<i>Lepidagathis cuspidata</i> Ness	Kandya	Summer		Winter	F
<i>Strobilanthes atropurpureus</i> Nees	Jimla	Summer	Rainy	Winter	F
<i>Acer oblongum</i> Wall.	Putli	Summer		Winter	F
<i>Achyranthus aspera</i> L.	Apamarg	Summer	Rainy	Winter	F
<i>Achyranthus bidentata</i> Blume.	Apamarg	Summer	Rainy	Winter	F
<i>Aerva sanguinolenta</i> (L.) Bl.	Saji	Summer	Rainy	Winter	F
<i>Cyathula tomentosa</i> (Roth) Moq.	Chirchita	Summer	Rainy	Winter	F
<i>Deeringia amaranthoides</i> (Lamk.) Merr.	Kali Jhar	Summer	Rainy	Winter	F
<i>Pistacia integerrima</i> Sw.	Kakar	Summer		Winter	F, D
<i>Rhus cotinus</i> L.	Jal Thunga	Summer		Winter	F
<i>Rhus parviflora</i> Roxb. ex DC.	Timu	Summer		Winter	F
<i>Semecarpus anacardium</i> L.f.	Bhilwa	Summer			F
<i>Carissa opaca</i> Stapf ex Haines	Rebuli	Summer	Rainy	Winter	F
<i>Holarrhena antidysentrica</i> (L.) Wall.	Kwera	Summer		Winter	F
<i>Ichnocarpus frutescens</i> (L.) Br.	Kali Dudhi			Winter	F
<i>Phoenix humilis</i> Royle	Thakal	Summer		Winter	F
<i>Hedera nepalensis</i> K. Koch	Matiyari	Summer	Rainy	Winter	F
<i>Cryptolepis buchanani</i> Roem. & Schult.	Dudhi-Bel	Summer	Rainy	Winter	F
<i>Asparagus adscendens</i> Roxb.	Shatavar	Summer	Rainy	Winter	F
<i>Asparagus curillus</i> Buch.-Ham.ex Roxb.	Kariu	Summer	Rainy	Winter	F
<i>Artemisia nilagirica</i> (Cl.) Pamp.	Titpati	Summer	Rainy	Winter	F
<i>Bidens bipinnata</i> L.	Arka-Jhar	Summer	Rainy	Winter	F
<i>Bidens pilosa</i> L.	Kumeri	Summer	Rainy	Winter	F
<i>Eupatorium adenophorum</i> Spreng.	Kala Basinga			Winter	F
<i>Galinsoga parviflora</i> Cav.	Marchiya Ghass	Summer	Rainy	Winter	F
<i>Inula cappa</i> (Buch.-Ham. ex D.Don) DC.	Pushkar-mool		Rainy	Winter	F
<i>Inula cuspidata</i> (DC.) Clarke.	Jhuri		Rainy	Winter	F
<i>Leucomeris spectabilis</i> D.Don	Pandwa	Summer		Winter	F
<i>Berberis asiatica</i> Roxb.	Kilmora	Summer	Rainy	Winter	F
<i>Alnus nepalensis</i> D. Don	Ujis			Winter	F
<i>Bombax ceiba</i> L.	Semal	Summer			F
<i>Cordia obliqua</i> Willd.	Bairala	Summer		Winter	F

<i>Cordia vestita</i> Hook.f & Thoms.	Lasora	Summer		Winter	F
<i>Ehretia acuminata</i> R.Br.	Pudila	Summer		Winter	F
<i>Ehretia laevis</i> Roxb.	Chamror	Summer		Winter	F
<i>Sarcococca saligna</i> (D.Don) Muell.-Arg.	Satpura			Winter	F
<i>Bauhinia purpurea</i> L.	Kwieryal	Summer		Winter	F
<i>Bauhinia retusa</i> Buch.-Ham. ex Roxb.	Kandela	Summer		Winter	F
<i>Bauhinia vahlii</i> (Wt. & Arn.) Benth.	Malujhan	Summer		Winter	F
<i>Bauhinia variegata</i> L.	Kanchnar	Summer		Winter	F
<i>Caesalpinia decapetala</i> (Roth.) Alston.	Karaunj	Summer		Winter	F
<i>Lonicera quinquelocularis</i> Hardw.	Bheida Kukri	Summer		Winter	F
<i>Viburnum continifolium</i> D.Don	Tirmuya	Summer		Winter	F
<i>Viburnum coriaceum</i> Blume.	Tirmu	Summer		Winter	F
<i>Viburnum mullaha</i> Buch.-Ham ex D. Don	Tirmu	Summer		Winter	F
<i>Stellaria media</i> (L.) Vill.	Badyau			Winter	F
<i>Capparis zeylanica</i> L.	Kiari	Summer		Winter	F
<i>Euonymus pendulus</i> Wall.	Bhambeli	Summer		Winter	F
<i>Anogeissus latifolia</i> Wall.	Bakla	Summer		Winter	F
<i>Terminalia alata</i> Roxb.	Saij			Winter	F
<i>Terminalia bellirica</i> (Gaertn.) Roxb.	Bahera			Winter	F
<i>Terminalia chebula</i> Retz.	Harar			Winter	F
<i>Ipomoea purpurea</i> (L.) Roth.	Bharad	Summer	Rainy	Winter	F
<i>Porana paniculata</i> Roxb.	Musi Bel	Summer	Rainy		F
<i>Coriaria nepalensis</i> Wall.	Makhol	Summer		Winter	F
<i>Cornus macrophylla</i> Wall.	Khagsi			Winter	F
<i>Cornus oblonga</i> Wall.	Gauntia	Summer		Winter	F
