

EDITORIAL

It is a matter of great pleasure that second issue of the journal of Universal College of Medical Sciences is coming. In the second issue we have come a long way in the terms of improving the quality of scientific articles and technical aspects. All the articles are peer reviewed by the experts of their respective fields. In terms of recognition our journal has received ISSN. In this issue we have included six original articles, two case reports, four review articles and an article on medical education.

Our first article highlights pattern of attentional task impairment in schizophrenic patients.

Peripheral neuropathy is a common complication seen in diabetics, our second article emphasize on detection of central neuropathy by using electro-physiological tools like BAEP.

We have other interesting articles on growth and development of infants, hypertension in early and mid adolescent children, impact of healthy life style on patients of diabetes mellitus.

We have received articles from other institutions as well. I hope this issue will surely upgrade your medical knowledge.

I welcome healthy suggestions, constructive criticism from the readers.
